Implementation Services

Specialist assistance at a critical point

Return on Investment

It is at the point of installation that you would hope to start to see a return on your Information Technology investment. Whether the return is directly measurable from a financial perspective or less tangible through service improvements, achieving that return will be critical to the project's objective, your role and the profitable use of IT by the organisation.

It follows that the installation and deployment of new IT systems and services tracks your designated plan and your user community expectation and is as trouble free as possible.

Helping Hand

The actual installation of new IT systems and solutions is generally not a routine event for many organisations.

Most organisations are manned for "business as usual", maintaining and supporting the standard line of business applications that the organisation uses. Implementing systems can stretch personnel to the detriment of the business.

In addition new IT systems often have extended, new or replacement features that require analysis, education and understanding to ensure their correct configuration at the point of installation.

Having Network Si personnel install your solution provides a critical helping hand at probably the most crucial phase of any infrastructure project.

Confidence

By using our expert teams to deploy and install your IT solutions you can be confident that your IT infrastructure solution should start to produce a return on investment as soon as planned.

At the minimum you can be sure that the actual installation is sound and provides a robust, best

practice framework on which to move your business forward.

Our ongoing and timely knowledge with the current technologies, manufacturer recommended practices and practical experience of installations dramatically reduces the risk of the deployment having to be repeated or not functioning as expected.

Planning and Risk

All our installation services are planned, risk assessed and agreed with you before any work commences.

Specialist Skills

We have detailed core expertise in Microsoft, Novell, Citrix and HP but this also extends to the supporting infrastructure in terms of network links, backup systems and access methods.

We are specialists in the following Microsoft areas:

- Advanced Infrastructure Solutions
 - Active Directory & Identity Management
 - Exchange Migration & Deployment
 - Hosting Solutions
 - Storage Solutions
- Information Worker Productivity Solutions
- Messaging & Collaboration
- Networking Infrastructure Solutions
- OEM Hardware Solutions
- System Building
- Licensing Solutions

Documentation Option

If required we can fully document the installation we undertake for you following deployment. This will reflect the actual system that was deployed (including any changes from plan) and means that you have a complete picture of your new IT configuration. This information can then be directly used by your Service Desk team or partner to support the system on an ongoing basis.

Primary Benefits

- ✓ A complete bespoke service that is more than just "insert the media" activity.
- ✓ We take the risk in installation and configuration and deal with any issues encountered.
- ✓ Our awareness of current best practice with a variety of hardware and software configurations reduces errors.
- ✓ An agreed plan means that all parties know what outcome is desired and how it will be reached,
- ✓ Manufacturer relationships mean that we can draw on wider expertise and second opinions if required.
- ✓ Takes the pressure off your in house personnel to learn and perform what is likely to be a "one-off" activity.
- ✓ Post installation documentation option means that you have all the support information you need.
