IT Strategic Review

Fit for Purpose
And
Fit for the Future

What Next?

Charting the way forward can be difficult in today's modern IT environment. Challenges abound in terms of return on investment, technology change and business requirements. In addition you already have a historical IT infrastructure to factor into the equation, as only the lucky few have a "greenfield" IT opportunity.

It produces a complex mix of influences that can be difficult to balance when trying to design the infrastructure to support the next phase of your organisation's IT services growth.

Where to Start?

This is where our IT Strategic Review Service comes in.

We look at what you currently have as your IT infrastructure, discuss with you your business's IT service requirements and marry that with our expert knowledge of information technology trends and best practice. Then we pull everything together in a detailed report that clearly states your position in the light of current requirements and trends and unambiguously states what you should do to maximise your IT investment now and in the future.

The result is a detailed commentary and statement of advice on your current Information Technology position and how you should shape it in the future to meet your organisational requirements.

Our Knowledge

As a Microsoft Gold Partner and HP Preferred Partner Network Si have unique insight into the current and proposed IT technologies used in today's enterprise. Regular meetings with both Microsoft and HP keep us fully abreast of changes and developments in all areas.

Business Service

The essence of our IT Strategic Review is that the benchmark used is related to the requirements of the business. The review is not driven by the latest technology, latest software or the latest pundit's comment. Instead we take our initial guidance from your business's requirements. Only by appreciating what your organisational requirements are will we recommend an appropriate strategy.

Full Report and Design

The results of the review are reported in a comprehensive document and associated presentation.

The report features:

- Executive Summary
- Business Services Benchmark
- Business Strategy and Plan Benchmark
- Analysis and Observations
- Conclusions
- Recommendations
- Next Steps
- Recommended Information Strategy
- Optimised Infrastructure Design

The associated presentation (delivered by one of our senior team) will summarise the report and allow you and your team an opportunity to discuss the report with us.

Options

If required we can add one or more of the following to the delivered service:

- **Workshop Day** - To discuss the review in greater detail and more depth.
- **Risk Log** - An initial run through any information technology risks that we discover during our review. Provides classification, description, impact analysis, probability assessment, proximity, resolution priority and our comments.

Primary Benefits

- ✓ Allows you to be sure that your next IT investments are appropriate and in line with current industry trends
- ✓ An independent but knowledgeable opinion to underpin strategy
- ✓ Provides a bespoke tailored design that fits your business
- ✓ Will cover new and upcoming technologies

Typical Coverage

A standard report and design will look at:

- Identification and assessment of Business Critical Applications
- Server deployments and desktop configurations
- Operating systems used
- Resilience and redundancy
- Infrastructure performance and access
- Storage usage and requirements
- Network infrastructure links
- Backup and recovery strategies

The above are looked at in relation to:

- Locations and business units
- Personnel (numbers and main functional groupings)
- Business objectives, plan and strategy
- Return on investment and available budgets
- Information Security objectives

The scope of the report can be tailored to a specific area if required.
